R2 Agro NutriScan

MilkDigester

With electrolytes for better milk utilization

Species
Young calves

Consumption
1 bucket of MilkDigester is enough to treat 7500 litres of milk

Packaging
3 kg buket including measuring scoop (100 grams)
4 buckets in a box
30 boxes on a pallet

WHAT is MilkDigester
MilkDigester is a combination of active ingredients and electrolytes, which enhance digestion in the calves together with a fast and effective acidification of cow's milk or milk replacers.

WHEN
MilkDigester should be mixed in a low dosage into the milk JUST BEFORE each feeding.

HOW
MilkDigester should be added with 10 grams to 25 litres of milk.

In automatic feeding systems MilkDigester should be added with 75-125 grammes per 25 kgs of milk replacer powder.

BENEFITS/EFFECT
- MilkDigester lowers the pH-value in the calf's intestinal tract and eliminates the bacteria, which cause diarrhoea (E-coli)
- MilkDigester enhances digestion of fat in the milk
- MilkDigester secures good clot formation of the milk in the intestine
- MilkDigester gives better manure (colour/consistency)
- MilkDigester ensures an optimum liquid- and salt balance in the body
- MilkDigester has a strong anti-diarrhoea effect.
